-

Targeted advertising is a form of online advertising that focuses on the specific traits, interests, and preferences of a consumer. Advertisers discover this information by **tracking your activity** on the Internet.

Aside from cookies, advertisers also learn about you in other ways, like checking your **search engine history** and finding your **personal information** on social media.

The more advertisers know about you, the more they assume about your buying habits. Age, gender, income, relationship status: Advertisers will take whatever they can get if it means they could sell you something.

Advertisers can now guess who you are by analyzing your location, browsing habits, and the types of sites you sign in to, like Facebook or Google. And the crazy part? Their guesses are surprisingly accurate, according to articles from **Digital Trends** and **MIT Technology Review**.

Targeting aims to improve the effectiveness of advertising and reduce the wastage created by sending advertising to consumers who are unlikely to purchase that product. Targeted advertising or improved targeting may lead to lower advertising costs and expenditures.^[3]

Benefits^[edit]

Proponents of targeted advertising argue that there are advantages for both consumers and advertisers:

Consumers^[edit]

Targeted advertising benefits consumers because advertisers are able to effectively attract consumers by using their purchasing and browsing habits this enables ads to be more apparent and useful for customers. Having ads that are related to the interests of the consumers allow the message to be received in a direct manner through effective touchpoints. An example of how targeted advertising is beneficial to consumers is that if someone sees an ad targeted to them for something similar to an item they have previously viewed online and were interested in, they are more likely to buy it.

Consumers can benefit from targeted advertising in the following ways:

- More effective delivery of desired product or service directly to the consumer:^[72] having assumed the traits or interests of the consumer from their targeting, advertisements that will appeal and engage the customer are used.

- More direct delivery of a message that relates to the consumer's interest:^[72] advertisements are delivered to the customer in a manner that is comfortable, whether it be jargon or a certain medium, the delivery of the message is part of the consumer's 'lifestyle'

Websites and digital platforms can gather such information from users' digital footprints and their behavior on their devices. Think of targeted ads like the algorithms of social media. Through algorithms, platforms can show consumers things that they like or are likely to enjoy.

This ensures that brands reach consumers who are genuinely interested in what they have to offer.

For consumers, their online shopping experience becomes enhanced because it is tailored to their exact needs. And advertisers can get a better return on their investment by using targeted ads.

Ad networks allow platforms to share information and follow user behavior across the internet. If an app is built without connection to an ad network, it can take a long time for the ads to become more targeted and customized. Innovative platforms can provide seamless and nonintrusive ad experiences, thereby boosting the overall user experience.

Pretty much any consumer trait can be targeted including demographic information such as:

- Race
- Age group
- Educational background
- Generational information
- Sex
- Income
- Religion

How cookies work

1.

The internet browser sends request to website server to access site

3.

The page loads in the browser and the browser receives the cookies and stores them on user device.

2.

The server generates cookies with data packets and sends it back
